Construction Fatalities Supplement, 2004 WA FACE Program January 7, 2005

In 2004 there were 17 construction fatalities (defined by the company's NAICS code) as counted by the WA FACE program (Figure 1). Most of the incidents in 2004 were due to falls from elevation, machinery, and motor vehicle incidents (Figure 2) and have occurred in the specialty trades (Figure 3). Nine of the 17 fatalities in construction during 2004 were either laborers, carpenters, or truck/equipment operators (Figure 4), and the incidents were in a variety of counties, though King and Snohomish Counties had the most (Table 1).

NOTE: There were several incidents this year in which the company was doing constructiontype of work, but due to industry coding for that company or incidents occurring outside of Washington State, these cases do not appear in this data summary.
